

ت	عنوان المحاضرة
1	Quality management in reproductive medicine
2	Lifestyle , periconception ,and fertility, The environment and Reproduction
3	Indication for in vitro fertilization treatment : From diagnosis to Prognosis
4	Initial investigation of the infertile couple
5	Prognostic testing for ovarian reserve
6	Drugs used for ovarian stimulation :Clomiphene citrate, aromatase inhibitors, metformin , gonadotropins, gonadotropin-releasing hormone analogs , and recombinant gonadotropins
7	The role of follicle – stimulating hormone and luteinizing hormone in ovarian stimulation
8	Endocrine characteristics of assisted reproduction technology cycles
9	The use of gonadotropin – releasing hormone agonists and the efficiency of in vitro fertilization
10	Gonadotropin – releasing hormone antagonists in ovarian stimulation for in vitro fertilization
11	Gonadotropin – releasing hormone agonist triggering
12	Segmentation of in vitro fertilization treatment
13	The use of ovarian reserve biomarkers to tailor ovarian stimulation for in vitro fertilization
14	Monitoring ovarian response in assisted reproduction (in vitro fertilization and intracytoplasmic sperm injection)
15	Luteal – phase support in assisted reproduction technology
16	Treatment strategies in assisted reproduction for the poor-responder patient.
ت	عنوان المحاضرة
17	Recurrent implantation failure
18	Ultrasonography in assisted reproduction
19	Sperm recovery techniques:clinical aspects
20	Processing and cryopreservation of testicular sperm
21	Embryo transfer technique
22	Cycle regimes for frozen – thawed embryo transfer
23	Anesthesia for in vitro fertilization
24	Medical considerations of single – embryo transfer

25	Endometriosis and assisted reproduction technology
26	Polycystic ovary syndrome and assisted reproduction
27	Management of hydrosalpinx
28	Fertility preservation strategies
29	Uterus transplantation
30	Viral disease and assisted reproduction technology
31	Severe ovarian hyperstimulation
32	Bleeding severe pelvic infection , and ectopic pregnancy
33	Iatrogenic multiple pregnancies : The risk of assisted reproduction technology
34	Egg and embryo donation
35	Gestational surrogacy
36	Patient support in the assisted reproduction technology program
37	The relationship between stress and in vitro fertilization outcome

ت	عنوان المحاضرة
38	Infertility guidelines
39	The impact of legislation and socioeconomic factors in the access to and global practice of assisted reproductive techniques
40	Religious perspectives on human reproduction
41	Risk and safety management in assisted reproduction technology
42	Oocyte retrieval and selection
43	Diagnosis of endometrial receptivity and the Embryo-endometrial dialog
44	Amenorrhea and ovulatory problems
45	Principle of laparoscopy and its role in infertility

46	Principle of hysteroscopy and its Role in infertility
47	Cervical factors in infertility
48	Artificial insemination indication and contraindication
49	Methods of surgical sperm retrieval
50	Gynecological endocrinology and its application in reproductive medicine
51	Genetic disorder related to female infertility and recurrent pregnancy loss
52	Androgen Disorders
53	Puberty and its disorders
54	Disorders of menstruation
55	Climacteric problems
60	Premature Ovarian Failure
61	Sexual Transmitted disease
62	Acute and chronic pelvic inflammatory disease

ت	عنوان المحاضرة
63	Endocrinolgy of pregnancy
66	Contraception and induced abortion
67	Male infertility : diagnosis and treatment
68	Azospermia ;investigation and treatment
69	Primary testicular failure,male hypogonadism
70	Ejaculatory disorders
71	Male endocrinopathy
72	Male infertility and genetic syndromes
73	Setting up an ICSI programme
74	Semen analysis
75	General Embryology- spermatogenesis
76	Early embryo development and graging
77	Urinary and genital tracts embryology
78	neurotranmitters
