Patients and methods.

Write the type of your study

(Retrospective, prospective, comparative) .One to two pages; write about type of your study, number, age, gender of your patients. Source of your data, and place where your thesis was done. Write about the methods you used for diagnosis, treatment, morbidity, mortality. Used a form to divide your patients according to their age, sex, presentation, and lab.investigations, imaging, preoperative preparation, operative findings, postoperative events and follow up. Try to search a help from statistician for statistical analysis.

.....

Results:

Write about number, age, gender of your patient. Youngest, oldest, range and mean.

Presentation (commonest), then in order of frequency .Lab. investigations. Types of imaging used .Simple investigation, then a more sophisticated one. Noninvasive, then invasive. Operative findings, types of surgical approach .Post-operative complications, morbidity, mortality and follow up.

Important note .Table () should precede your table while figure should be below your figure. Number of tables and figures should be reasonable.

Discussion:

First write something general about your study, then take each parameter of your results and compare it with other *national* , regional and international studies (age, gender, presenting features, lab.investigation, imaging studies, invasive procedures, surgical approaches

Conclusion:

Try to be short, precise and close to what you wrote in the abstract.

Recommendations:

may be with limitation of your study
